

**GOA BOARD OF SECONDARY AND HIGHER SECONDARY EDUCATION  
ALTO BETIM, BARDEZ – GOA**

**Syllabus For the Academic Year 2026 - 2027**

**Subject : Physics**

**Subject Code : 4702**

**Class : XII**

Following table gives the section wise content which have been deleted for the  
Academic Year 2026 – 2027

Sections are as per the NCERT books, PHYSICS Part I and II

Published by the Goa Board of Secondary and Higher Secondary Education,  
Print Edition – 2020 ( Reprint -2024)

| <b>Chapter</b>                                                | <b>Page No.</b>                                               | <b>Remarks</b>                                                                                                                                                                                                                                                                    |

| 5 | Weightage to the type of Questions | SA-II ( 3 marks) X 02 = 06<br>SA-I ( 2 marks) X 05 = 10<br>VSA ( 1 marks) X 04 = 04<br>( 2 MCQs)  |
| 6 | Scheme of options                  | Option in<br>1 SA- II Type question                                                               |
| 7 | Numericals                         | 20% - 25% ( 04 – 05 Marks)<br>( As far as possible avoid/ minimize the use of Logarithmic tables) |

### **Pattern and Design of First - Term Examinations 2026 - 2027**

|   |                                    |                                                                                                                                                              |
|---|------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 | Time Duration                      | 150 Minutes                                                                                                                                                  |
| 2 | Maximum Marks                      | 60                                                                                                                                                           |
| 3 | Weightage to Objective             | Knowledge : 30 %<br>Understanding : 50 %<br>Application : 20 %                                                                                               |
| 4 | Difficulty Level                   | Easy = 20%<br>Average = 60%<br>Difficult = 20 %                                                                                                              |
| 5 | Weightage to the type of Questions | LA ( 4 marks) X 2 qns = 08<br>SAII ( 3 marks) X 6 qns = 18<br>SAI ( 2 marks) X 10 qns = 20<br>VSA ( 1 marks) X 14 qns = 14<br>( 7 MCQ)<br>Total 32 questions |
| 6 | Scheme of options                  | Options in 2 LA Type + 1 SAI Type                                                                                                                            |
| 7 | Numericals                         | 20% - 23% ( 12 – 14 Marks)<br>( As far as possible avoid/ minimize the use of Logarithmic tables)                                                            |

## **Evaluation Scheme for Board Practical Examination**

### **for the Academic Year 2026 – 2027**

1. Time duration : 180 minutes
2. Maximum Marks 20
3. Students would be required to perform two experiments,  
one from each section A and B 08 + 08 = 16  
  
Practical Record ( Journal) = 02  
Viva – Voce on Experiments = 02  
  
Total = 20
4. External Examiner : One experiment (08) + Viva - Voce (02) = 10
5. Internal Examiner : One experiment (08) + Journal (02) = 10

### **PRACTICAL PORTION :**

**At least 12 Experiments [ minimum 6 from each section] to be performed by the students during the academic year 2026 -2027].**

### **List of Experiments**

#### **SECTION–A**

1. To determine resistance per cm of a wire by plotting a graph for potential difference versus current.
2. To find resistance of a given wire using metre bridge and hence to determine the specific resistance of its material.
3. To verify the laws of combination (series) of resistances using a metre bridge.

/OR/

- To verify the laws of combination (parallel) of resistances using a metre bridge.
4. To determine resistance of a galvanometer by half-deflection method and to find its figure of merit.

5. To convert the given galvanometer (of known resistance and figure of merit) into a voltmeter of desired range and to verify the same.

/OR/

To convert the given galvanometer (of known resistance and figure of merit) into an ammeter of desired range and to verify the same.

6. To find the frequency of AC mains with a sonometer.
7. To draw the I-V characteristic curve for a p-n junction diode in forward bias.

## **SECTION-B**

1. To find the value of  $v$  for different values of  $u$  in case of a concave mirror and to find the focal length.
2. To find the focal length of a convex mirror, using a convex lens.
3. To find the focal length of a convex lens by plotting graph between  $v$  and  $u$ .

/OR/

4. To find the focal length of a convex lens by plotting a graph between  $1/v$  and  $1/u$ .
5. To determine angle of minimum deviation for a given prism by plotting a graph between angle of deviation and angle of incidence.
6. To determine refractive index of a glass slab using a travelling microscope.
7. To find the refractive index of a liquid using convex lens and plane mirror.
8. To find the refractive index of a liquid using a concave mirror.

## Internal Assessment Scheme 2026 – 2027

Areas for the internal assessment for XII standard students in the subject Physics, for the academic year 2026-27.

Students shall be assessed for 20 marks based on the two areas (10 marks each) during the academic year 2026 – 27.

### 1) Area 1

Students to perform any 5 activities from the listed 13 activities and to maintain the record in the Physics Journal.

Total marks : 10 (5 activities X 2 marks)

List of Activities:

1. To measure the resistance and impedance of an inductor with or without iron core.
2. To measure resistance, voltage (AC/DC), current (AC) and check continuity of a given circuit using multimeter.
3. To assemble a household circuit comprising three bulbs, three (on/off) switches, a fuse and a power source.
4. To assemble the components of a given electrical circuit.
5. To study the variation in potential drop with length of a wire for a steady current.
6. To draw the diagram of a given open circuit comprising at least a battery, resistor / rheostat, key, ammeter and voltmeter. Mark the components that are not connected in proper order and correct the circuit and also the circuit diagram.
7. To identify a diode, an LED, a resistor and a capacitor from a mixed collection of such items.
8. Use of multimeter to see the unidirectional flow of current in case of a diode and an LED and check whether a given electronic component (e.g., diode) is in working order.
9. To study effect of intensity of light (by varying distance of the source) on an LDR.
10. To observe refraction and lateral deviation of a beam of light incident obliquely on a glass slab.
11. To observe diffraction of light due to a thin slit.
12. To study the nature and size of the image formed by a (i) convex lens, or (ii) concave

mirror, on a screen by using a candle and a screen (for different distances of the candle from the lens/mirror).

13. To obtain a lens combination with the specified focal length by using two lenses from the given set of lenses.

## **2) Area 2**

For remaining 10 marks, students can select any one topic from the list provided. After completion of the selected area students are supposed to submit the report (individually) as per the guidelines given. Students can work as a group or can complete the task individually.

Distribution of 10 marks:

- i) Report : 05 marks
- ii) Presentation : Viva – voce : 03 marks
- iii) Objective achieved from the selected topic of study : 02 marks

### **Guidelines for report submission**

- 1. Title
- 2. Abstract
- 3. Table of content
- 4. Hypothesis / Objective
- 5. Background research / Theory
- 6. Material List
- 7. Experimental procedure
- 8. Data analysis
- 9. Conclusion
- 10. Ideas for future research
- 11. Acknowledgment
- 12. Bibliography

## **Suggested Topics for Area 2**

### 1. Innovative Project

### 2. Physics in Sports

Explaining the Physics principles involved in any two sports.

### 3. Conducting Science quiz ( with demonstrations) for lower classes ( XI or IX and X)

### 4. Field trip at any of the higher education institutes like, IIT ( Goa), NIT (Goa), NIO, Goa university etc and to find out about the research work going on at the institute.

### 5. Physics in Kitchen

To study 3-5 physics principle applied in the kitchen

### 6. Visit to Power ( Electricity) Department and getting first hand information on the functioning of different sections of the department. Interacting with the Engineers and lines man.

### 7. Visit to I.T.I. / Repair – Technician

To learn the Physics involved in the functioning of different equipment/ machines , like Mixer – Grinder, Refrigerator, Electric Fan, Two – Wheeler etc.

### 8. Physics in Musical instruments

Explaining the Physics principles involved in any two musical instruments ( wind instruments/ string instruments/ percussion instruments...etc).

### 9. Physics principles in structural designs

To study the application of Physics principles in structural design and construction of building and bridges by visiting a construction site with prior permission from the builder/ contractor/supervisor. Interacting with civil engineer and architect.

### 10. Physics principles in Ship building

To study the application of Physics principles in designing, building and fabrication of boats, barges and ships by visiting a dockyard/ Goa Shipyard/ Ship building institute with prior permission from the authorities.

### 11. Similar to the above, students are to be encouraged to explore areas beyond points 1 to 10 and learn the fascinating applications of Physics.
